The following is an Examiner's Statement of Reasons for Allowance: The Prior Art of Record discloses the use of PTC thermistors for overheat protection of semiconductor switching elements. Odaohhara et al. (US 2002/0021539) discuss the importance of offering hysteresis in the switching on/off of the associated circuitry. Souri et al. (6,181,541) teach the use of multiple PTC thermistors in the protection of a semiconductor switching element. However, the Prior Art of Record does not disclose nor suggest the claimed combination of an overheat protection circuit found within Independent Claim 1, which includes first and second PTC thermistors thermally coupled to the same temperature detection portion and used with a control element for controlling a semiconductor switching element. The first PTC thermistor changes resistance in response to sensed temperature and allows transition the operating-mode of the semiconductor switching element from a first conductive operation to an interrupt operation and the second PTC thermistor changes resistance in response to sensed temperature and allows the return of the operating-mode of the semiconductor switching element from the interrupt operation to the conductive operation at a return temperature which is lower than the interrupt temperature.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
